## PRESS RELEASE

### *Dan Wensley Recognized as a Leading Channel Executive*

**Ottawa, Ontario, March 3, 2008** – LPI Level Platforms Inc. today announced that Dan Wensley has been named a 2008 Channel Chief by CRN, the flagship publication of CMP Channel. CRN Channel Chiefs are recognized as influential executives who consistently defend, promote and execute effective channel partner programs and strategies.

As Level Platforms VP Partner Development, Dan led Level Platforms to 350% growth in 2007 with world-wide adoption of its flagship product, Managed Workplace, by more than 2500 solution providers in 29 countries.

"We are all very proud of Dan's tremendous contributions in supporting solution provider's successful transition to managed services," said Peter Sandiford, CEO of Level Platforms. "To achieve this recognition for the third consecutive year is a great honor and well deserved reflection of the impact he has had on the sweeping changes to the channel introduced by managed services."

This is the sixth consecutive year that *CRN* has developed the Channel Chief list. Top Channel Chiefs were chosen based on criteria including policy and program innovations made during the past year, the amount of revenue their company generates through partners, their willingness to speak out publicly on behalf of the channel, and the number of years they have dedicated to channel activities.

"Successful channel programs and strategies help fuel the booming Solution Provider ecosystem, and each of this year's Channel Chiefs should be applauded for building and advocating the most successful of those programs and strategies," said Dan Dignam, vice president and publisher of CMP Channel.

#### **About Level Platforms**

Level Platforms is the leading provider of managed services software for IT solution providers servicing small and mid-sized end customers through its award-winning remote monitoring and management software, Managed Workplace. Managed Workplace provides everything a managed services provider needs to remotely monitor and manage their end customers' IT networks through a single web-based central dashboard.
