

Elfiq Networks Receives Level Platforms' Certified Vendor Accreditation

Elfiq Networks now a certified vendor and integrated into Level Platforms solution for maximum MSP and customer business continuity

Montreal, Canada (December 8th, 2009) — Elfiq Networks, the innovation leader in bandwidth management and network availability solutions, is now a Certified Vendor in Level Platforms' vendor partner program. Through this new relationship, Managed Service Providers (MSPs) have the ability to deliver services using a business continuity approach.

Elfiq's link balancers reinforce the Internet strategy in place at both the MSPs' control centers and customer premises to deliver maximum results and reduce operating costs through the strategic use of multiple ISP carrier links at each site from different providers and technologies. Should a carrier get saturated or stop operating normally, the use of Elfiq's products guarantees that the MSP service remains active.

Elfiq's SitePathMTPX point-to-point resilience feature ensures maximum uptime between sites by multiplexing applications such as VPNs. As a result, end-users obtain unparalleled performance, redundancy and additional bandwidth with little effort and a lower cost of acquisition and maintenance for MSP services.

"Elfiq Networks is very proud to be the first link balancer vendor to be granted this status from Level Platforms," said Jean Pascal Hebert, Vice President Business Development at Elfiq Networks. "This relationship will bring new levels of performance and excellence in delivering services around Level Platform's MSP solutions, guaranteeing performance and availability."

"As more small and medium-sized businesses become more reliant on the Internet to conduct business, the corresponding value of Elfiq Networks' solutions, which protect their Internet connectivity, increases," stated Ryck Marciniak, Level Platforms' Director Business Development. "Therefore, it was an easy decision for us to work with Elfiq Networks and include them in the comprehensive suite of solutions that are monitored and managed by our industry-leading software, Managed Workplace."

Elfiq Networks is rapidly becoming the leader in bandwidth management and ISP link balancing by developing a global network of reseller partners, along with providing key solutions to organizations in over 59 countries worldwide.

Elfiq Networks' link balancers enable organizations to utilize multiple concurrent ISP circuits to prevent Internet connectivity downtime and improve overall access performance. With more Internet-based applications and services being used in organizations every day, proper access to the Internet has become a critical asset to normal business operations, where loss of connectivity or ISP link saturation can result in lost revenue.
